# SOIL COMPACTORS

Our Soil Compactors are made with heavy steel pipe to ensure consistent soil compaction and smoothness. A 1" plug allows the compactors to be filled for additional weight. Wheel packages are available for pull type compactors for easier handling. All soil compactors are available with 12" diameter drums.

PL3PT-6	72"	3PT	488	804
PL3PT-7	84"	3PT	549	920

Our core-plug aerators are simply the best buy on the market. We feature a pull type design (available with optional wheels for easier transportation) or a 3-point hitch design. Both are made using a 12" diameter drum that can be filled for additional weight. All of our aerators include a solid 1" cold rolled steel axle attached to pillow block bearings rather than bushings for longer life and better operation.

Our core-plug aerators utilize a standard  $\frac{15}{16}$ " x 7" core tine. The unique design allows our core tines to move slightly during operation thus allowing easier penetration if subsurface obstacles are encountered and enhances the release of the plugs thereby reducing the possibility of the core tines from becoming stopped up. An added feature of the 3-point hitch frame is that it has been designed to accept 16" blocks for added weight.
